GNU nano 4.8 miniproject2.py
import sys
from pyShor import prime_factorize

Tarkista, että annettu oikea määrä argumentteja
if len(sys.argv) != 2:
 print("Usage: python miniproject2.py <number>")
 sys.exit(1)

Yritä muuntaa argumentti kokonaisluvuksi
try:
 number = int(sys.argv[1])
except ValueError:
 print("Error: The argument must be an Integer.")
 sys.exit(1)

Suorita prime factorization annetulle luvulle
print("Factoring...")
factor = prime_factorize(number)
print(factor)
